

For an assignment I did from a course in my previous major of Graphic Design before I switched over to Information Technology, that would be that the course was AC-2797-1 Digital Photography with the assignment being posting your favorite photo out of all the photos from all of the assignments throughout the semester to a discussion board for a critique at the end of the semester with explaining why this was your favorite photo and why you like it.

When it comes to how I specifically did this assignment and critique with how I approached it, that would be that the favorite photo I ended up choosing was a photo from that of the motion assignment which involved exploring the concept of motion in photography using your camera's shutter speed and ISO setting to freeze motion or to create motion blurs with taking a total of 50 photos and submitting them as a contact sheet and then choosing your 8 best photos and submitting them as a separate contact sheet. For the one specific photo I chose out of the fifty from this assignment with what it was about along with how I explained that it was my favorite and why I liked it, that would be that the motion photo was a photo taken in a car while it was moving at night in a town with all of the streetlights when they were on with an f/2.8 camera F-Stop and what I specifically said for the reason of why I liked it was because of all of the lights with that of their movement and direction which all meet in the middle of the photo and make it the center focus of attention with all the different brightness and colors that also make it seem as if your going through a tunnel.

When it comes to what I ended up learning from this assignment, that would be how to take photos in a certain kind of way through that of specific camera settings as

well as factors and elements too with also talking about everything in a certain kind of way as well about photos.
